

Ready to add new trees to your landscape? Trees not only beautify your outdoor space, but also improve your health and add monetary value to your property. Let's keep your neighborhood green with the best trees for your location and landscape goals. Preservation Tree Services is your partner in expert tree planting.

What's included:

- Our experts help you choose the right tree for your landscape.
- We source & deliver your chosen tree variety to your property.
- We plant your tree in the proper size/type hole, at the right depth.
- We apply hardwood mulch to insulate roots & retain moisture.
- Every tree planted includes a one-year warranty.
- We provide tips on fertilizing, soil health, expert pruning, and more.

TREE MENU: Which tree is right for your space?

LARGE SHADE TREES

Best for shading your home & landscape. Must have 60-feet of surrounding space to grow. Cannot be planted on easements or under power lines. They absorb the most pollutants because of their size.

- Live Oak
- Cedar Elm
- Chinquapin Oak

MEDIUM TREES

Perfect for moderate sized urban landscapes. These trees will need about 40-feet of surrounding space to grow to their full size.

- Monterrey Oak
- Chinese Pistache
- Crape Myrtle 'Natchez'

ORNAMENTAL/UNDERSTORY TREES

These selections are excellent trees for smaller urban landscapes or as features in garden beds in sunny locations.

- Japanese Maple 'Bloodgood' (*plant in shade to part shade only*)
- Oklahoma Redbud
- Yaupon Holly

Planting location must be clear of debris, irrigation heads/lines, tree stumps, utility lines, etc. Homeowner must locate and mark any irrigation heads/lines or utility lines prior to site selection. Staking provided only when recommended by the arborist at an additional cost. Planting area within 25 miles of Dallas & Fort Worth offices, details online.

Tree Planting Services

Why are we part of the efforts to reforest DFW?

It may surprise you to learn that Dallas-Fort Worth is home to one of the largest urban forests in the United States. It is easy to take our magnificent trees for granted; but, the demands of rapid population growth, pollution, poor tree maintenance, drought and the aging of our trees make it more important than ever to focus on urban reforestation.

According to the Texas A&M Forest Service, due to persistent drought, new construction, poor maintenance, storms and other factors, we've lost 500 million trees in Texas over the last few years. Let's say that again: 500 million trees

Part of reforesting our urban areas will not only include plantings in public spaces and commercial properties, but also helping homeowners plant high quality trees on their properties and replace trees that have to be removed. Greening up DFW will require that new trees be expertly planted to ensure their long term success.

Our goal is to help you keep the trees you love and keep Dallas-Fort Worth green using skilled pruning, planting, and specialized plant health care techniques.

In a 2006 study performed by the Texas Trees Foundation, it was discovered that the environment was rated #3 as a top concern for Dallas residents. 81% were concerned about air pollution, while 73% were concerned about water pollution. The current 14+ million trees in Dallas help to reduce carbon in the area by two million tons. These same trees capture more than 59-million cubic feet of storm water runoff. Large shade trees such as Live Oak, Cedar Elms and Chinquapin Oak trees strategically planted around a home can reduce energy (heating and cooling) consumption by up to 25%. If we want a healthy environment, we need more trees!
